Zayo Provides Critical Connectivity to AltNets and ISPs

Do what you do best – delivering broadband connections to local homes and businesses, and let us do what we do best – providing you and your customers with reliable, cost-effective Internet connectivity.

- **We've connected our future-ready, secure network to strategic Openreach Exchanges nationally.**

- **This supplies the backhaul AltNets and ISPs need to connect their local presence to key data centres via the Zayo network.**

- **Data centre connectivity is core to what we do - with approximately 200 data centres connected to the Zayo network in the UK & Ireland.**

Glasgow · Edinburgh · Newcastle · Manchester · Leeds · Dublin · Birmingham · Leicester · Amsterdam · Utrecht · Milton Keynes · London · Düsseldorf · Brussels · Bristol · Slough · Lille · Frankfurt · Paris · Strasbourg · Zurich · Geneva · Lyon · Bordeaux · Montpellier · Toulouse · Marseille

Broadband for All

The AltNet community is critical in ensuring affordable, reliable broadband connectivity to communities across the UK and Ireland. In fact, of the 97% of households in the UK that are served by broadband, 66.4% are AltNet connections. (Stat: Ofcom International) Broadband Scorecard 2022). To help meet the goals of our AltNet customers and keep up with increasing broadband demand, Zayo continues to enhance and expand our fibre network.

Zayo's Tier-1 Network Helps Drive a Better Customer Experience

- Zayo operates one of the UK and Ireland's most expansive, independent fibre footprints

- Our robust and scalable assets provide access to all major business regions and metropolitan areas

- Data centre connectivity is core to what we do - with approximately 200 data centres connected to the Zayo UK & Ireland network

- Multiple owned and operated subsea systems connect countries and anchor the UK & Ireland to Continental Europe and the United States

- Access to hyperscale, retail, regional, and edge data-centre facilities across the UK

- Zayo's continues to enhance, upgrade, and expand the UK and European core networks, lending to greater reach and reliability

- An upgraded, low-latency route from Manchester to Amsterdam via the new Zeus subsea cable

- IP Transit available for 10 and100G ports today and 400G IP Transit is coming soon

Network Designed for a Competitive Edge
Leverage high capacity bandwidth on the **most direct and lowest latency routes**. Our network is built for the most demanding Carrier and AltNet requirements and is supported by our 24/7 dedicated Network Operation Centre (NOC) and implementation team
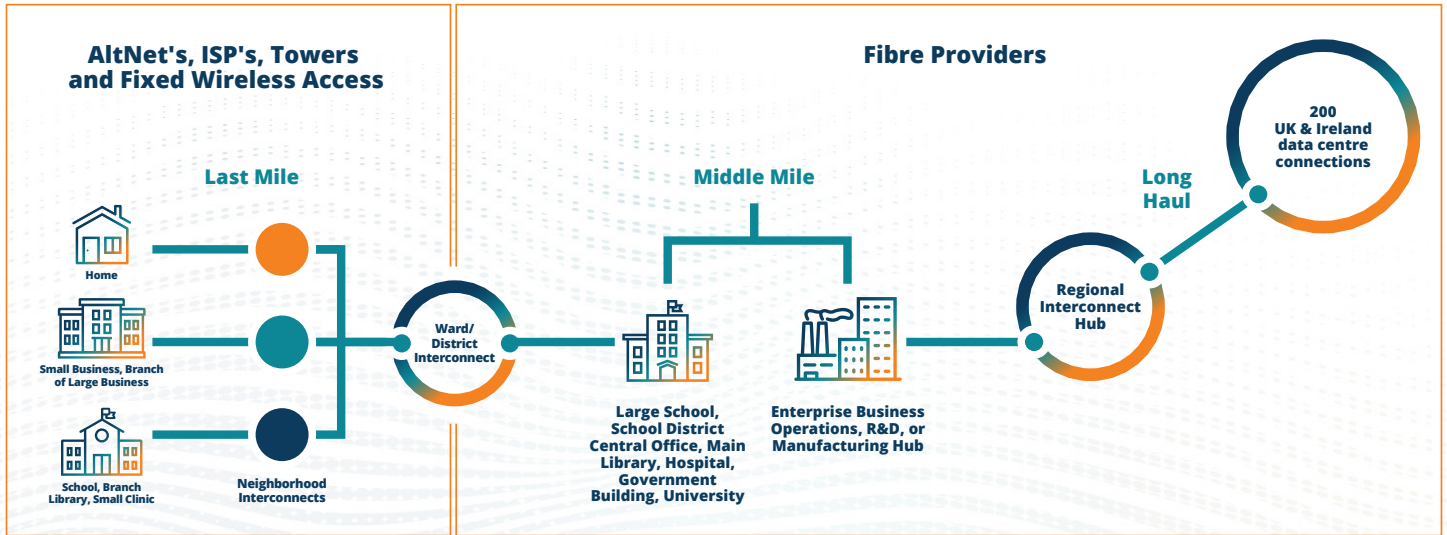

Ensure Continuity
Maintain fully functional networks with **100% diversity and 99.999% uptime** – even in the event of catastrophe

Seamlessly Scale with Our Expansive and Constantly Evolving Network

- Connect between data centres with Fibre, SD-WAN, MPLS, Ethernet, IP Solutions, and Wavelengths

- Benefit from dense metro and long haul networks and between key eco-systems and population hubs

- We interconnect with the top content providers and Internet exchanges all underpinned by the Zayo network which offers **lowest latency, future-ready, most sustainable and reliable connectivity**

Zayo creates solutions designed specifically for AltNet's and ISP's
